

WRIGHT AT HOME

Method in creation will come freely to him who learns to see in the abstract. Study the geometry that is the idea of every form: a quail, a snail, a shell, a fish.
- Frank Lloyd Wright

Can you design flowers using only geometric shapes?

Frank Lloyd Wright was inspired by the geometry and patterns found in nature. Explore your garden for flowers or look online for images. Look at the shapes that make up the petals and leaves of the flowers. **What shapes can you see?**

- Use construction paper to cut out simple shapes: rectangles, squares, triangles, rhombuses, and circles.
- With a glue stick, combine shapes to form flowers or other plants.

Combine your geometric flowers to create a flower display for someone you love.

Show us your design with **#WrightatHome** and tag **@flwtrust**.
